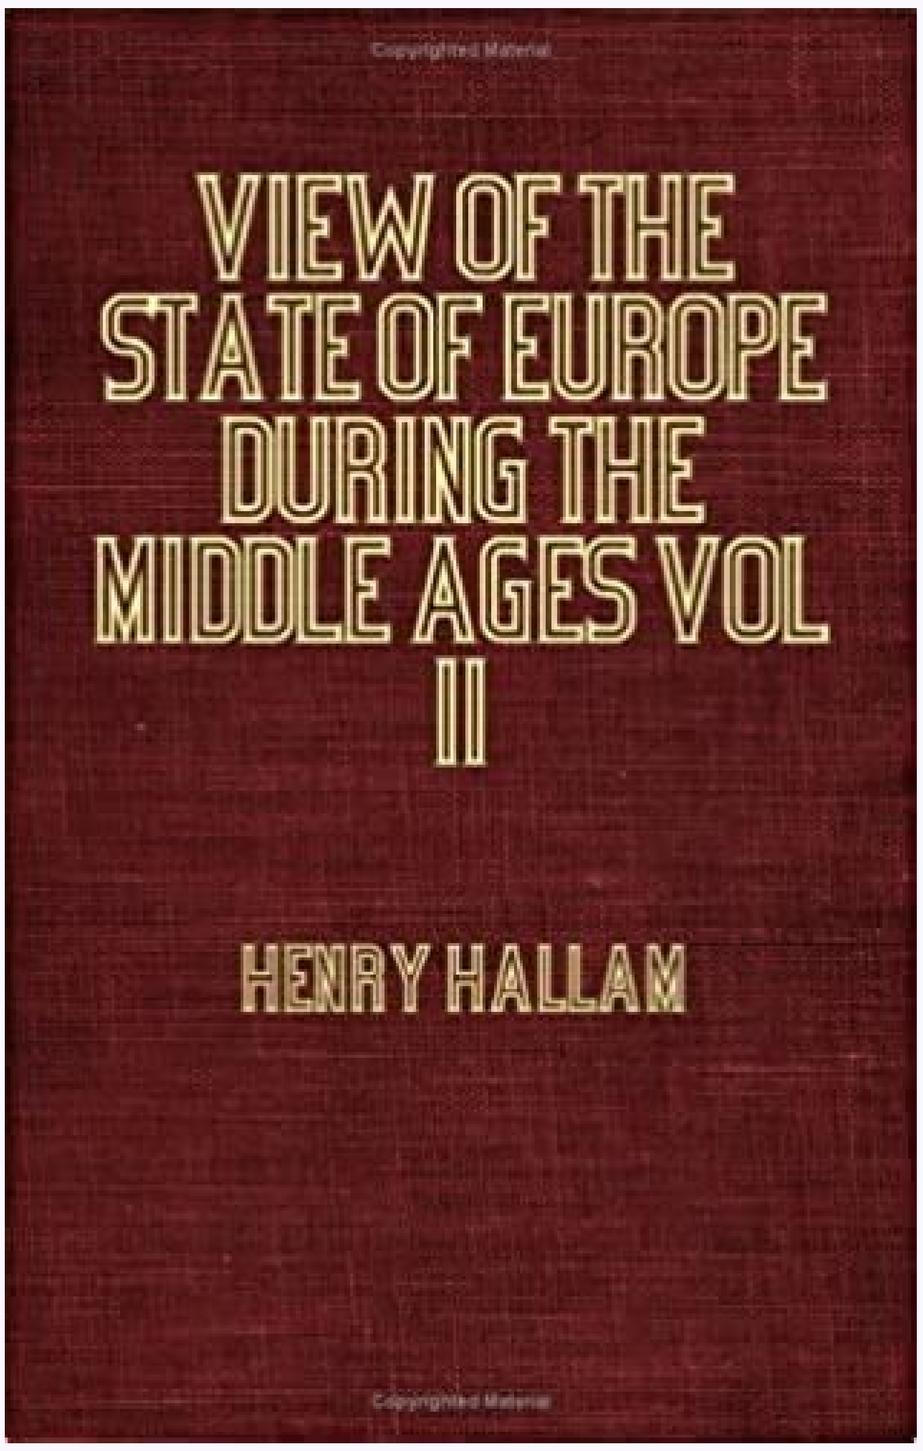
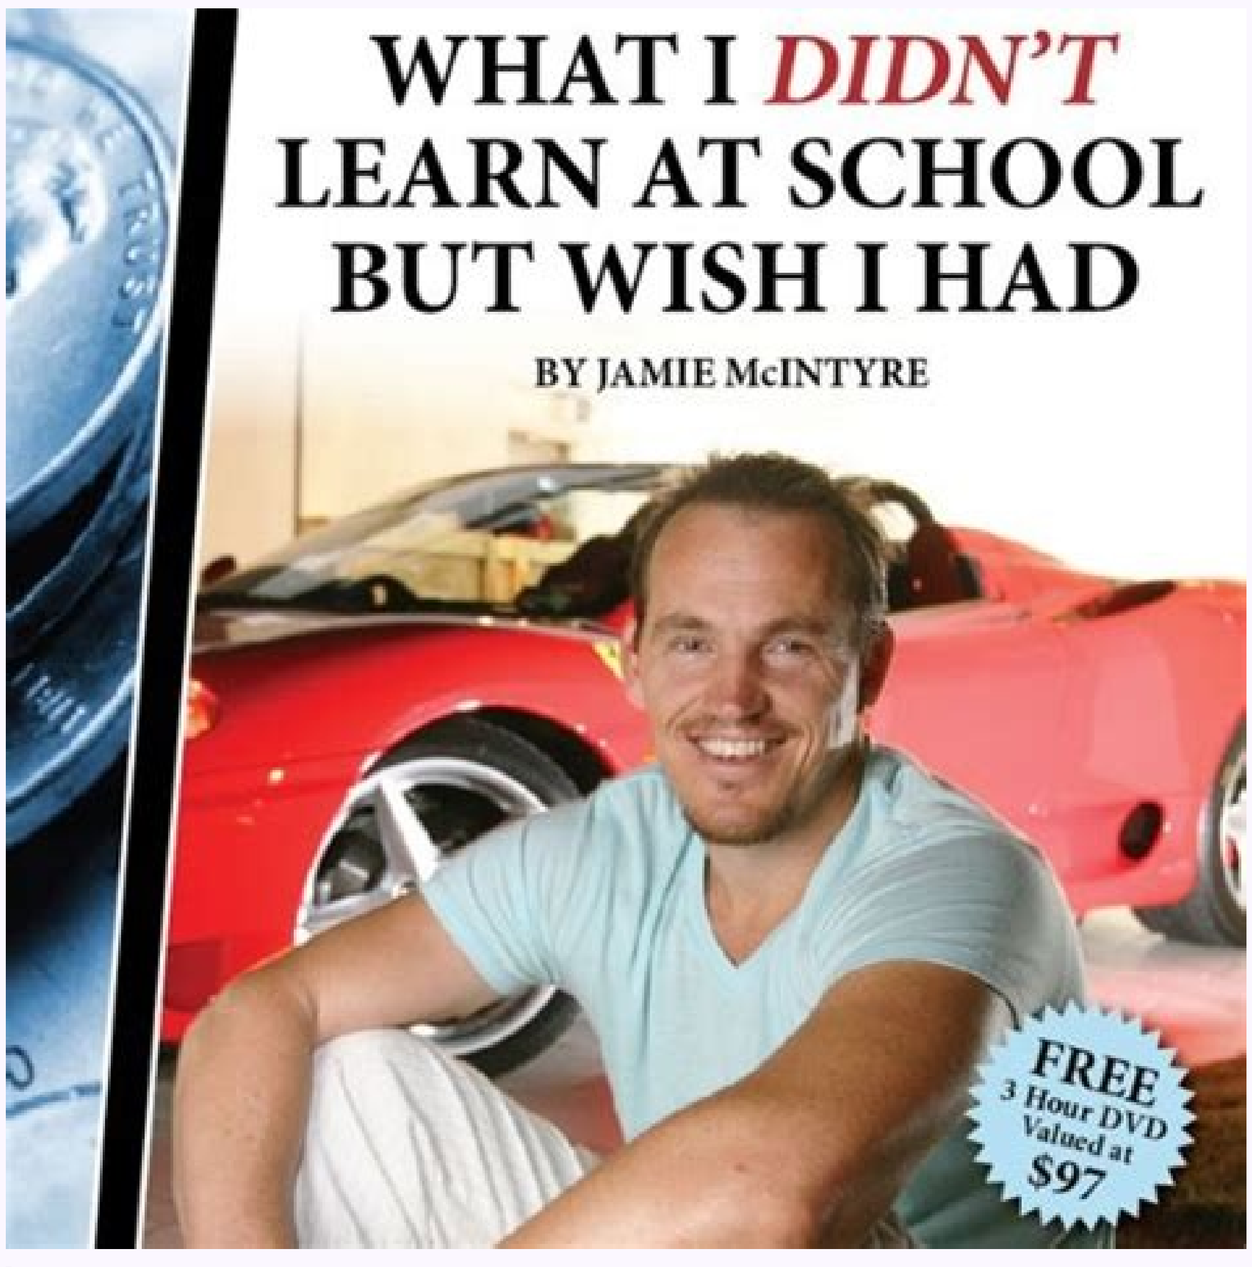
Toward the end of his life, Richard Feynman's fame had transcended the confines of the scientific community. His exploits as a member of the commission investigating the space shuttle *Challenger* disaster gave him widespread exposure; similarly, a best-selling book about his picaresque adventures made him a folk hero almost of the proportions of Albert Einstein. But back in 1961, even before his Nobel Prize increased his visibility to the general public, Feynman was more than merely famous among members of the scientific community—he was legendary. Undoubtedly, the extraordinary power of his teaching helped spread and enrich the legend of Richard Feynman.

He was a truly great teacher, perhaps the greatest of his era and ours. For Feynman, the lecture hall was a theater, and the lecturer a performer, responsible for providing drama and fireworks as well as facts and figures. He would prowl about the front of a classroom, arms waving, "the impossible combination of theoretical physicist and circus barker, all body motion and sound effects," wrote *The New York Times*. Whether he addressed an audience of students, colleagues, or the general public, for those lucky enough to see Feynman lecture in person, the experience was usually unconventional and always unforgettable, like the man himself.





Somehow, as someone loves to teach and talk about science, I learned a lot from these few pages as I did from the rest of the book. His 50 years since the publication of the Feynman Lectures on Physics. For those looking for more pop-physics in such vein, I can really recommend Why Does E=MC2 by Brian Cox and Jeff Forshaw, Quantum by Manjit Kumar and Black Holes, Worm Holes and Time Machines by Jim Al-Khalili. The dualism of the mind-body from a physical perspective: "When an animal learns something, it can do something different from before, and its brain cells must be changed even if it is made of atoms. It is especially important for the first pupils because they are still learning language, and reading helps them understand the sounds and words of patterns do. There are math games and phonic guides, and you will find a selection of activities to do at home, sorted by age and degree level. Storyline Online One of the best known sites where you will find free online books for children is Storyline Online.
