Note that image size and quality when you press it lightly. To get the most out of the imaging capabilities of your camera, use a quality setting of "HQ" High Quality or "HQ Wide" or better. Movie quality is a standard that determines the detail, smoothness, and clarity of the image during playback. Reducing image quality let's you shoot longer, so you can switch to "Normal", or "LP" conserve remaining memory. Learn More However here we are just four months later and I'm reviewing a new, even more powerful Exilim Zoom, the 12.1 megapixel EXZ1200, which is the new top of the range.

A typical 10 megapixel image is 3648 x 2736 pixels, while the images produced by the EXZ1200 and

Sony's DSCW200 are 4000 x 3000 pixels. While that may sound pretty huge, it's only a difference of 176 pixels horizontally and 132 vertically, or less than a ten percent gain in actual image size. Considering that the EXZ1200 is currently retailing for around 190, while the EXZ1050 is only about 130, you have to ask yourself if an extra 176 pixels is worth a fifty percent higher price. It is a technically very sophisticated camera with a wide range of features and options, which go a long way towards justifying the price. Casio's Exilim range has been consistently excellent since its inception, with a long series of models that have competed on equal terms for technical merit, performance and quality with the best compact cameras that any other manufacturers have produced, and when handling the Z1200 it is very clear that it is another quality product. It measures 93.3 x 58.5 x 22.4mm, which is in fact a little slimmer than the Z1050, but it also weighs 152g minus battery and card, which is well above average for a camera of this size, and as a result the Z1200 feels a lot denser and heavier than most of its rivals. This isn't a bad thing by any means, because it adds to the feeling of quality and makes the camera more stable when shooting at lower shutter speeds. The rather chunky feel and the sensibly placed rear thumbgrip make the camera solidly comfortable to hold. The overall design is sensibly understated, and the flat profile of the flush retracting lens and the smooth pocketfriendly curved corners look functional without being plain. Primary control over the camera's many features is via a row of icons down the righthand edge of the screen, which are selected by simply scrolling up or down using the Dpad, then left and right to make menu selections. I really like this control system, and consider it to be a good selling point for Casio cameras.

The main shooting mode menu, at the top of the onscreen list, has wider range than most pocket compacts. It features the usual Auto snapshot mode, Casio's signature Best Shot mode and video mode, as well as aperture priority, shutter priority and full manual exposure. While it's obviously no substitute for a real semipro camera or SLR this does at least offer some creative versatility for the more experienced photographer. Opinions are divided on face detection technology; all the camera manufacturers or at least their marketing departments seem to think it's the best thing since sliced bread, while I and many other reviewers think it's a largely pointless gimmick that doesn't work particularly well anyway. However Casio has taken face detection one step further with a feature that even I have to admit is pretty cool. The Z1200 doesn't just detect and focus on faces in the frame, as conventional face detection systems do; it can actually be programmed to recognise the individual faces of up to 36 friends and family members and give priority to those, so that in a crowd of faces it will focus on the right ones. I tested this feature on a few helpful friends, and I found that like most face detection systems it worked well under ideal circumstances, when the faces in question were well lit, at close range and looking straight into the lens, but was less reliable when the faces were in shadow, partially obscured or turned slightly away from the camera. Again it's a bit of a gimmick, but it's a technologically astonishing one. It's just a pity it's not really all that useful. It's not a bad system by any means, but it's not as good as those from Panasonic, Canon or Sony. It starts up in a little over two seconds, which is good, but it is Casio's brilliant AF system that really stands out. It focuses reliably in around half a second in pitch darkness at a range of well over three metres thanks to an AF assist lamp.

In normal lighting it is virtually instant, and again utterly reliable. It has nine focus points, with spot AF, tracking AF, manual focus, 6cm macro and infinity focus available as well. In singleshot mode it can shoot a frame approximately once every two seconds, which is quicker than average. In normal speed continuous mode it shoots approximately one frame every 1.3 seconds, while in highspeed mode it can shoot at around three frames a second, although this is limited to three megapixels. In both cases shooting can continue until the memory card is full. As well as this there is a continuous mode with flash, and a bizarre "zoom continuous mode, which shoots both a normal picture and a digitally zoomed version simultaneously. Colour reproduction, exposure and detail are all very good, and dynamic range is also higher than I had expected. Casio has neatly sidestepped the problem of

highISO image noise by omitting ISO settings above 400 altogether, and judging by the image quality at this setting stopping there was probably a good idea. The only real weak spot is the 3x zoom lens, which appears to be based on Pentax's aging Sliding Lens System. While it produces relatively little distortion at the wide angle end and none at the telephoto end, it is only really sharp in the centre of the frame, producing significant corner blurring and chromatic aberration towards the edges of the frame especially in wide angle shots. It has superior build quality, good handling and classleading performance, and decent image quality. The only real question is whether you feel it's worth paying a significant premium for a trivial increase in image resolution. On this page the full size image at the minimum ISO setting has been reduced to let you see the full image, and below that a series of full resolution crops have taken from original images at a range of ISO settings to show the overall image quality.

" In some cases, the full size image has been reduced for bandwidth purposes, and a crop taken from the original full resolution image has been placed below it to show the overall image quality. Some other pictures may be clicked to view the original fullsize image." See below for a full res crop, or click to see the whole picture. Please excuse the time stamp on this and some other images. Whoever had this review sample before me forgot to switch it off, and I didn't notice it at first. In some cases, the full size image has been reduced for bandwidth purposes, and a crop taken from the original full resolution image has been placed below it to show the overall image quality. Some other pictures may be clicked to view the original fullsize image." Amusingly, the face detection system thought that this was a human face. There is highlight and shadow detail in this shot. Protect the environment; support your local pirates. Also, the fillin flash works very well. We use industry standard tests in order to compare features properly. We'll always tell you what we find. We never, ever accept money to review a product. Most people really dont need more than 6 megapixels to take nice stills that you can edit, crop, post to the Web, or even print out to a respectable size. Larger images can be more trouble than theyre worth for casual users, since larger file sizes require more memory and computer power to store, process and edit. That said, higher resolutions can be handy. The more pixels you have in an image, the more you can zoom in and look at fine details, and the larger you can blow up prints. What does this mean for you. Dont get sucked into the megapixel hype, and dont sacrifice image quality or performance just for a few more pixels. Like the Panasonic Lumix DMCFX100 and the Sony Cybershot DSCW200, it packs a 12megapixel sensor into a portable, relatively pocketable package. Despite its relative heft, the Z1200 cuts a similar profile to other Exilim Zoom cameras.

Its body measures just 0.9 inch across, making it slim enough to fit into a shirt or jacket pocket. A 2.8inch LCD dominates the cameras back panel and dwarfs the screens of many other compact cameras. The cameras joypad and buttons feel small and cramped, and can confound largethumbed users. While its physical buttons can seem awkward, the cameras software interface works quite well, revolving around an onscreen sidebar that offers direct and intuitive access to nearly every camera setting. A mechanical image stabilization system physically shifts the CCD while shooting to reduce blur and shake. Like an increasing number of snapshot cameras, the Z1200 also offers a facedetection mode when framing shots of people. Most cameras with face detection simply recognize all faces as faces; the camera sees what it recognizes as a face, and it adjusts focus and exposure accordingly. If you have a lot of different people in the frame and want the camera to focus on only people you know, you can record their faces in the cameras memory. While the feature is only useful in certain limited situations, it offers a new twist on the increasingly standard facedetection feature. These exposure controls are handy if you want more control over your shots, but theyre hardly perfect; the cameras lens can only toggle between the widest and narrowest aperture settings; you cant select a middle ground when in aperture priority or manual modes. A wider angle or stronger telephoto lens would have been a nice touch. The camera also falls short in terms of sensitivity; while most pointandshoots can reach ISO 800 or ISO 1600 levels, the Z1200

tops out at ISO 400, limiting your options when taking lowlight or highspeed shots. Lets round up its best gems. Lets round up Amazons best gems. Lets round up the Disney gems you might have missed. This sparked competition to make slimmer compact digital cameras, with other manufacturers bringing out lines of comparably thin cameras from 2004.The early models only had digital zoom, though more recent models have optical zoom as well.Several newer models support H.264 video compression which uses much less storage than Motion JPEG format.They come with a small amount of internal memory and are not bundled with a memory card. Many Exilim cameras come with a bundled charging and docking cradle. The cradle is used to recharge the cameras battery and to connect the camera to a PC or PictBridge compatible printer.However, videos are deliberately limited to 10 minutes in China, DI, and EU, because of customs import tariffs discriminating between picture and movie cameras.Photohands allows rotation and resizing of images and print a picture with the date superimposed. The Multi Frame SR Zoom works at lightning speed to combine image information from several shots into a single sharp, clear photo. No problem! With BEST SHOT you can create and save your own motif programs, which you can then access at any time. You can adjust the contrast as well as the colour saturation. The result is extraordinary highcontrast images with enhanced contours and vibrant colours, reminiscent of pop art.There are approximately 1 million worldwide place names available that can be inserted into the image data.

Using the Panorama function, you can obtain extremely wide panoramic shots with an impressive field of view of up to 360 degrees. Well now you can Whether you want to create an oil painting,

crayon or watercolour effect, the three new BEST SHOT modes help transform your photos into mini masterpieces. In Premium Auto mode, your EXILIM digital camera will not only automatically select the appropriate BEST SHOT motif program, but will also optimise its settings again, enabling you to take great photographs even in poor lighting conditions. Shaded subjects are often underexposed and hard to make out, and illuminated subjects are much too bright. The BEST SHOT highspeed lighting mode combines multiple shots with different exposures into one photo, ensuring a photo with optimal exposure. But just what is the ideal size for a poster, email attachment or for reproducing a detailed section of a picture. Find out how easy it is to set the image size in your camera so that it does the job you want it to do! This means you can combine images to create exciting and totally unbelievable scenes. You can adapt the size of the cropped subject to best fit the background, and the Dynamic Photo subjects can then be transformed into a video using the EXILIM camera itself. All you have to do is relax and wait for the right moment, then press the shutter release button! In Landscape Mode, colours appear vivid and clouding, haziness or mist in the picture is automatically reduced. The outcome is a clearer landscape or skyline with sharp contours, a bright sky and more vivid colours. No problem! The HighSpeed Best Selection function automatically selects the best photo from a highspeed serial picture recording of up to 30 photos a second, and then saves it.

With the shutter release button half pressed, the camera can hold up to 25 photos in the buffer memory showing real team spirit. For example, you can record a goal or the start of a stunt even if you have missed the actual moment thanks to Prerecord! BEST SHOT mode ensures that telephoto shots in particular are clear and in focus. Try it; you will be impressed! The lighting function optimizes the contrast automatically even in scenes with backlight or bright background. The practical Movie Button enables you to react spontaneously and always film the best scenes. With the camera switched on, a touch of a button is all it takes to start recording. So you can enjoy the moment and focus your full attention on your subject. With EXILIM cameras, you can quite easily capture that unique moment or any hilarious sights in a photo while you're recording a movie. Unfortunately, when it's simply set the camera focus and, as soon as you're happy with the moving subject, press the release button fully. Your photo will be perfectly in focus. Because surroundings are extremely bright, subjects often appear to be too dark. With Auto Framing, your subjects are always in focus. Layout Shot creates fun photo collages while they are still in your camera. Part 2 of the Movie Editing Function lets you cut out an area between two images. With the Movie Editing Function you cut your films before or after an individual frame. With Revive Shot you simply give your old photos a new digital life. Since the surroundings are extremely bright, motifs often appear too dark. They are lost, everything is returned to the initial setting. Unless you use the mode memory. Learn how to switch on the Anti Shake DSP for difficult photographs. Just set the right picture size. Surprise yourself. It is exactly this type of distortion that Business Shot corrects. The flash assist can help you to improve such photos. Easy! Just add the correct sound.

The photo remake combines the pictures you have saved with sound recordings in a few short steps. The histogram clearly displays the exposure conditions and helps to avoid over and underexposures. If your motive is not at the centre, what then. The focus lock helps. Photographing fastmoving objects is thus made simple. It always helps, if you have someone else take a photo of you and you would like to select the background yourself. The camera also incorporates CCD shift image stabilization and the latest Exilim Engine 2.0 image processing module with motion analysis technology. These innovative features work together to help prevent blurry shots due to shaky hands, subject movement, or poor focus when photographing moving subjects such as children or pets. In addition, the autotracking AF system now combines both face detection and motion analysis technologies so once the focus is locked in, the camera automatically tracks a moving subject's face, maintaining both sharp focus and correct exposure. The EXZ1200 is extremely versatile with 33 BestShot Scene modes, in camera image editing, a comprehensive video recording feature that can

record videos in Wide format, and responsive image capture. There are even manual exposure capabilities available if you wish to apply greater creative control to your picture taking. Though small enough to be held in the palm of the hand, the camera incorporates an impressively large 2.8-inch, Wide and Bright LCD display. This high-resolution, 230,400 pixel LCD displays images and data with outstanding clarity and fine detail, and makes viewing under any light condition incredibly easy. Transferring images to your PC and making prints is a very simple process thanks to the included USB cradle. Simply pop the camera into the cradle and you can transfer files to your PC quickly and easily.

You can also present your images on a television screen thanks to the video output on the cradle or see your favorite images displayed right on the camera's large LCD display. The USB cradle also charges the camera's batteries so your EXZ1200 is always ready to shoot. With such super high-resolution, you'll be able to reproduce crystal-clear images, even in very large print sizes. The USB cradle also charges the camera's batteries so your EXZ1200 is always ready to shoot.

12.1 Megapixel Resolution The Exilim EXZ1200 produces images with an incredible 12.1 megapixels of resolution for excellent quality photos that you can print to poster-sized enlargements, or tightly crop your images while still preserving the finest details.

3x Optical Zoom Lens The high-quality lens of the EXZ1200 incorporates 7 lenses in 6 groups, and includes aspherical lens elements for crisp and clear images.

Beautifully Designed Metal Casing The all-metal casing of the camera ensures impressive durability, while the gently rounded corners and the interplay between the camera's various design elements are really eye-catching. Furthermore, the compact format in combination with excellent ergonomic design ensures that the EXZ1200 digital camera is exceptionally comfortable to hold.

Exclusive Exilim Engine II The Exilim Engine II incorporates several components in a tiny space, works extremely quickly and saves energy. Thus it makes it possible to offer high-resolution photos, high-quality movies and a large number of functions including Casio's motion analysis technology, in a camera that fits neatly in any pocket. The Exilim Engine II also provides several unique functions including Tonal Range control to reduce loss of detail in bright and dark areas, and helps to achieve smoother expression of skin tones and clear blue skies, and Face Detection technology provided by OKI's face image processing engine, FSE Face Sensing Engine to ensure beautiful portrait and group shots.
