Stay up to date with the latest news and updates on your favorite animation app and join the community! Á Facebook: Á Reddit: Á Twitter: Á Youtube: Nodes is \*the best\* simple animation app available on the iOS market!! It is a great tool for learning animation, even in a school environment for students or newbies. At the same time, Stick Nodes is robust and powerful enough to allow even the most skilled animators to show their skills!Thank you for trying Stick Nodes! Leave any questions / comments below or on the main Stick Nodes website! Common questions have already been solved on the FAQ page here 17 May 2021 Version 3.2.3 ÁÁÁ (3.2.3) Some bug fixes and minor changes, see the website for more information ( ).ÁÁÁ Segments can now be curved.ÁÁÁ Many internal updates and changes to improve stability.ÁÁÁ Added "Quick Resize Tools" which show when you select a picture/text field. It can be deactivated in "View Options". Zoom increased up to a maximum of 5,000%. I love this app. It's an amazing beginner's guide and helps me draw comics. It's a great app, for everyone except one thing, I have a super weird lag or glitch or something, I went to the app to make a new animation. As usual I got the "professional version" or any other advertisement. As soon as it stopped loading my screen went red and blue 3D 3D I like those 3D movie glasses when you keep them away. My stickman had this meme face and everything stopped for a second, and then a pop-up stickman, just like the one that had that face before, appeared on the screen. After everything worked out, and it didn't happen again. I was just wondering if it was an Easter egg or if someone hacked into my phone. You use it to draw comics? It is a very accurate application of this... application. I'm so sorry about the pun the way I delete this repl- When I say it's better, I mean it's better. Not just because © I like to animate more stop motion, but also because of the purchases inApp. I mean, you have to pay a lot of money to get the things that a movie needs in Stop Motion Studios (well, it doesn't need, but stuff to make a good movie with.) But here, Stick Nodes, it's just the sound you buy. And in my opinion the sound is not so important, you can simply import your movies into iMovies and then add some sounds (but I think I like more sound effects in Stick Nodes). I mean, the game is so simple yet so GOOD. I highly recommend it for beginner animators. It's hard to make stickmen for me, so I use models. My only suggestion: keep up to date. Fixed delay for other people (my ping is fine right now, but I haven't heard much for others.) I'm making a Naruto-Sasuke video right now, and I'm going to make a movie between us with Stick Nodes. Especially during the quarantine, this is a good time to download this, I love it. Thank you for creating this game. \*Update: Thanks for the answer, Now I see that there are more Pro than I thought, I could actually get since I'm planning to get a better laptop that might be better than getting things that delay my old phone. thanks for the updates, and keep doing a good job. á « á thank you for the review! I'm glad you like it. I'm still working on updates;) btw just for the record, pro has more than just a sound. there are also filters (offuscation, glow, etc) etc.)It is quite clean at your point though, these are not "required" things so ppl can get well with the free version. Hi, I've already done a test animation, but here's the problem. I'm trying to make one for real, but everything is so confusing! I can't figure out how to add my stick figures, how to save them and much more. I know there are more tutorials, but maybe developers could make the interface more understandable? Why? © Only when I thought I had it, I didn't. I don't even know if I made my stick figure right! The reason I gave three stars instead of one, is because © Looks like it could be pretty fun to use, and it has potential. If you do not want to change your interface to other users, could you do a similar version, as there are light and dark themes on other apps, maybe a normal and beginner? It could really be useful, since at first I didn't know how to start creating, because © There is no obvious button to do this. It turns out you have to click on the logo. I don't know how it really works (since I said it is really confusing) I can't write a review on many of the functions. Besides, could I add that when I saved my test, it was totally, how do I put it, looking? He didn't seem very round when they were round. Sorry for writing a long review. There's a bit of a learning curve, get what you mean. Help familiarize yourself with this type of animation in advance, but it can be a bit much. Once you understand the basics it's all a bit falling down. I will try to add some kind of tutorial guided in the app soon in a future update that should help with this. For now there are (as you mentioned) many online tutorials for "the bases" of the stick nodes, this is good: The developer, ForteLoss Games, Inc., indicated that the privacy practices of the app may include of data as described below. For more information, see the IL privacy policy. The following data may be used to track you through apps and websites owned by other companies: The following data may be collected but not linked to your identity: Privacy practices may vary, for example, depending on the features you use or your age.
