How to attach diffuser to hair dryer

Many people are familiar with the daily routine of washing, drying, and styling their hair. Although hair will eventually dry on its own if given enough time, most people reach for a hair dryer to speed up the process. While science may have disproven the link between wet heads and catching colds, it's still no fun to sit around with a head full of wet hair, especially in the winter.Hair dryers, also known as blow dryers, were first sold in the 1920s. At first they were pretty dangerous to use – hundreds of people were electrocuted when they dropped their hair dryer into water-filled sinks and bathtubs.That isn't as likely today, however, because of the advent of Ground Fault Circuit Interrupters (GFCI). Since 1991, all portable hair dryers have been required by U.S. federal law to protect you against electrocution should you accidentally drop one in water while it's plugged in [source: CSPC]. This applies whether the hair dryer is on or off. A GFCI is the larger, polarized plug that you'll find on many consumer appliances. When they're plugged in, GFCIs monitor the amount of current that's running from one slot of a wall outlet through an electric circuit and back to the other slot. If they sense a leak in the current, they trip the circuit. (See How does a GFCI outlet work? for details.)What happens to a hair dryer if you drop it in water when it's not plugged in? You don't run the risk of electrocution, since there's no source of current, but you can certainly damage the hair dryer if all of its components get wet. So, plugged in or not, it's a bad idea to throw it in the tub.Have you ever wondered what those components are inside a hair dryer that lets you blow hot air through your hair without burning your scalp? Keep reading to find out why you won't sizzle. Curly hair ain't nothing to trifle with. The spiral-y way it grows out of your hair looks beautiful, but ultimately, it's more fragile than straight hair and can get dry really easily. So when you've got curls and you're looking for a blow-dryer, you have to be extra selective.But finding the right tools for curly hair can be tricky. Use the wrong flatiron, curling iron, or heat setting, and you can potentially destroy your curl pattern. A blow-dryer is no different. Choosing one that's too powerful can lead to loads of frizz – and on the opposite end, a less intense airflow can take forever to get hair dry. There are several factors that differentiate a blow-dryer for curly hair from one that's better for textures without a bit of bend. "A blow-dryer is the most invaluable asset in your beauty tool arsenal and is worth spending a little extra (research and) money on," explains New York City-based hairstylist Devin Toth of Salon SCK. "It's so important to find a high-quality, durable hair dryer that comes equipped with diverse heat settings and blow-dryer attachments that suit your specific hair needs." For starters, it should have multiple heat settings, as well as and a powerful airflow to dry tighter curls quickly, but not to the point of dry out or damage. As a shopping starting point, keep in mind that your blow-dryer is more about the tool itself and not just the attachment. You can easily replace a diffuser; you'd have to start over with the base if it conks out – and that's often a pricier purchase and requires a bit of research. Another major consideration for curly textures is whether you're looking to simply dry and define your curls or if you want to smooth your hair out into a blowout. This is where the attachments really come into play. To help sort out which is best for your desired style, we consulted several hairstylists, all of whom have been asked frequently by their clients which are the best blow-dryers to use at home. Here's what they shared as their favorite blow-dryers for curly hair.All products featured on Allure are independently selected by our editors. However, when you buy something through our retail links, we may earn an affiliate commission. T3 - Cura Hair DryerAmazonYou're probably familiar with T3's line of professional-quality hair tools. The award-winning T3 Cura hair dryer isn't exactly cheap, but it still costs about half the price of the Dyson Supersonic. If you're looking to invest in a top-of-the-line blow dryer but don't want to spend \$400, this is your next best bet.Like with the Supersonic, the Cura dries hair incredibly fast, thanks to its wide design that allows for more air flow. The Cura also has three heat settings, two speeds, a cool shot button, and an ionic generator to reduce frizz and enhance shine. Additionally, it comes with two concentrator attachments, has a 9-foot cord, and is gorgeously designed with its white and rose gold color scheme.Amazon reviewers report that, compared to The Supersonic, this one is lighter, quieter, and easier to use, and prefer its cord. One person wrote, "It reduces frizz VERY impressively; I have very damaged hair, but it smoothed it out so gorgeously that I felt like I had new hair. I didn't even use frizz-reducing products! [...] I know that this dryer is expensive, but you get what you pay for. This is an excellent product that will allow you to grow your hair healthily, without burning those strands. I highly recommend it." Heavy and hard-to-hold hair dryers can seriously slow down your morning routine and are inconvenient to travel with. So, to quickly get yourself ready in the mornings, you might want to ditch that old awkward dryer and start using one of the best lightweight hair dryers, many of which are just as powerful as models twice their size. These slim, compact dryers are easy to wield no matter what hairstyle you're going for. Plus, with lightweight dryers, it's super easy to pack them in your gym bag or carry-on luggage.These versatile, must-have tools come in a variety of options. So, when you're on the hunt for the best lightweight hair dryer, you should consider things like the weight, handle design, material, and heat. For maximum maneuverability, avoid hair dryers with wide handles or handles that don't offer grip support. And for convenience and adaptability, consider one with multiple speed and heating settings; they make the process faster and easier to avoid using the highest setting, which can cause heat damage over time. Ample cord length and additional attachments are also nice options to have in a hair dryer. Finally, hair dryers with ionic technology and tourmaline can also help cut down on frizz. For some great suggestions, check out my roundup of the best lightweight hair dryers to use. All of these dryers are top-rated, portable, and weigh about a pound or less to help you blow-dry your hair quickly and get on with your day.1The Overall Best Lightweight Hair Dryer The Rusk W8less 2000 watt dryer is a powerful, lightweight choice made with tourmaline and with an ionic generator to help protect hair. Weighing less than a pound, it's capable of delivering fast styling. This hair dryer features seven different heat and speed settings (including a cool shot to help set your hair) so you can find the perfect temperature, plus it uses far-infrared rays to help dry hair thoroughly. It even includes a concentrator attachment that's designed for straightening. With more than 1,500 five-star reviews, it's a customer favorite.What fans say: "Best hairdryer I've ever used. I have naturally curly hair that frizzes instead of attractive curls. Most dryers won't take the frizz out and I have to flat iron it after drying. This 2000 watt dryer and a big round brush will get it straight with a slight curve, with no frizz, so that I don't have to flat iron it and I can tell my hair is healthier as a result."2The Best Lightweight Hair Dryer With A Diffuser AttachmentNition Ionic Ceramic Hair DryerAmazonThe Nition ionic ceramic hair dryer is a great option that comes with three removable attachments – including a diffuser attachment, which is ideal for curly or frizzy hair. You also get a comb attachment for detangling and a concentrator for straightening. Best of all, this lightweight hair dryer features ionic technology and tourmaline materials to help protect hair, but it only weighs a pound. Additional bonuses include three heat settings and two speed settings plus a cool-shot button. With 1875 watts of power, it's not as strong as our top pick, but the 4.3 rating suggests that it works just fine in most situations. What fans say: "I love this thing and the diffuser attachment thing is freaking awesome, it dried my hair way quicker than my other blow dryer and I didn't feel like I was damaging my hair at all."3The Best Ultra-Compact Hair Dryer Conair 1600 Watt Folding Handle Hair DryerAmazonIf you want a dryer that you can take with you virtually anywhere, the Conair 1600 watt folding handle hair dryer is it. The foldable handle makes this easy to store in your purse, bag, or carry-on luggage, and the dual voltage for worldwide use makes it perfect for traveling. Plus, this only weighs about a pound. While it doesn't feature ionic technology or tourmaline for hair health and is less powerful than the first two picks, it's a great deal for the price and extra portability. It also still features two heat and two speed settings to suit most hair types. What fans say: "Really like this travel dryer. It's lightweight and the handle folds up saving on space. Plenty of power to quickly dry my short hair."4The Best Budget-Friendly Lightweight Dryer For the most bang for your buck, this Revlon 1875-watt hair dryer (with more than 1,900 reviews and a 4.3-star overall rating) does the job and costs less than \$10. While you don't get added perks like the ionic or tourmaline, it still features two heat and two speed settings along with a cool shot button. Plus, it weighs just over a pound. What fans say: "This is a great hairdryer. Despite its small size, it works well to quickly dry my hair. It is also easier to handle than the larger and heavier hairdryer I use to have! The price was better than both Target & Walmart. I definitely recommend this product if you are looking for a lighter, more compact dryer that is still powerful enough to get the job done!"Bustle may receive a portion of sales from products purchased from this article, which was created independently from Bustle's editorial and sales departments. Our editors independently research, test, and recommend the best products; you can learn more about our review process here. We may receive commissions on purchases made from our chosen links. In an ideal world, we'd be getting a professional blowout every day at home, by our on-call stylist, followed by a massage from our in-house masseuse. But we digress. The point is, for most of us, regular blow-outs just aren't a thing. And no matter whether you're attempting to recreate a salon-worthy blowout in your own home, or just want to get your hair dry, a good blow dryer is invaluable. Your options are endless, from basic drugstore buys to high-end models boasting all the bells and whistles imaginable. Ahead, the best blow dryers out there, with something for every haircare need—and every budget. This is definitely one of the pricier tools of the bunch, but well worth the investment. Among some of the noteworthy features: Five heat and two speed settings, a switch that allows you to turn the ionizer on and off depending on how much texture and volume you want, and an automatic pause sensor that stops the dryer when you release the handle. It's been a mainstay in our haircare routine for years (with no signs of wear and tear), which should make you feel a bit better about shelling out the big bucks. What Our Testers Say "If blowouts are your jam, this dryer is an upgrade you won't regret," she said after testing this product. "It's an investment that'll end up saving you money over time." — Ashley Rubell, Product Tester For those ready and willing to invest some big bucks in a hot tool, this is the one to purchase. The brand known for creating the Rolls Royce of vacuums has done the same with the blow dryer, pretty much entirely upending the category. This high-ticket tool has all kinds of techy features, think a sensor that measures the temperature 40 times per second to prevent heat damage and a high-velocity jet of air for faster drying. The motor sits in the handle, making it extremely lightweight, and it's also super quiet; it's not surprising that so many pro stylists love it. Like we said, ionic technology is a great choice for tamping down errant frizzies. These days, you can find it in almost every dryer out there, but this one deposits even a higher amount of ions than other dryers to completely smooth your strands. There are also three heat and three speed settings, allowing you to customize exactly what you need based on your hair type and texture. As any curly-haired girl will tell you, blow-drying is a little bit of a different beast when your hair isn't straight. This set comes with two devices. There's a more traditional type blow dryer with all the features you need. But what's really worth calling out here is the unique hand-shaped diffuser that scrunches curls to keep them intact and fluffy, but never frizzy. Natural hair, which tends to be thicker and coarser, often requires a bit more heavy lifting when it comes to blow-drying. Whereas many blow dryers top out at 1800 or 1875 watts, this is even more powerful, coming in at 2000 watts. It also uses far-infrared heat to speed up dry time, always a good thing when you have thicker hair. The motor on this guy is 50% more powerful than that of standard dryers, meaning you can go from wet hair to dry hair in less than 10 minutes. (Still, the motor also somehow manages to use 75% less energy than others, go figure.) It also uses volcanic rock minerals to help completely seal the cuticle of the hair for maximum shine and smoothness. Again, go figure. If you don't particularly feel like turning your styling routine into an arm workout, try this blow dryer. Despite the fact that it is a full-size, pro-grade, 1800-watt dryer, it weighs less than just one pound. We also appreciate the extra-long, 14-foot power cord, and the fact that it's super quiet. Admittedly, all of these blow dryers are great for at-home blowouts, but this one really takes the cake. (After all, who better to come up with a dryer great for blowouts than a major blowout bar?) It lets you score an ultra-smooth, frizz-free style, fast, and even comes with two different concentrator attachments to customize airflow. Another excellent—and very affordable—choice, this boasts a pro-level AC motor. It also has ionic technology to combat frizz and keep hair smooth, as well as ceramic technology for even heat distribution. Also nice: It comes with both diffuser and concentrator attachments. Ionic technology is choice for helping to smooth out hair and keep it frizz-free, though sometimes it can make fine hair a bit too flat. That's why we appreciate that this fancy pants pick features a touch screen design that lets you control the ionic element, dialing it up and down as needed. The touch screen also lets you adjust the speed, temp, and even the cool shot button. Forget relying on those dinky, mini dryers in the hotel bathroom or locker room of the spin studio. Pack this portable pick to ensure a good blow dry anytime, anywhere. It's small enough to easily fit into any suitcase or gym bag but still packs as big of a punch as its larger counterparts. Plus, it comes with two equally-portable attachments and a convenient travel pouch. The latest from this big-time hair tool brand boasts a special new kind of aerodynamic technology, which makes for not only a faster dry time but also up to 30% more shine. The unique contoured nozzle also results in smoother and more even airflow, so hair stays in alignment. Translation? Extra shine. The array of five fun colors it comes in is just the icing on the cake. According to our Diversity Pledge, 15% of products in our newly-published market roundups will feature Black-owned and/or Black-founded brands. At the time of publishing, we were not able to find any hair dryers from a Black-owned and/or Black-founded business. If you know of one we should consider, please email us at contact@byrdie.com and we will evaluate the product ASAP.
