How to set up intex easy set pool without filter

You don't have to be a kid to enjoy cooling off in a pool on a hot summer day. Unfortunately, the cost of building an in-ground pool is just too great for many homeowners. That's why aboveground pools are such a popular alternative, and it's difficult to top Intex pools when it comes to affordable aboveground pools that are easy to install.Intex offers a wide variety of pools to choose from, so it can be tough to find the right option for your yard. You have to decide on the right type, size, accessories, and other features to make sure your family gets the most out of your pool, and with the number of options that Intex provides, it's easy to get overwhelmed.If you're looking to buy an Intex pool, check out our top recommendations. If you want some general tips on how to choose an Intex pool, keep reading our shopping guide.Intex pool benefitsOn average, it costs at least \$22,000 to install an in-ground pool. Intex pools are available at a fraction of the price, and many options are even cheaper than other aboveground pool options.Intex pools are extremely quick and easy to set up. Some only require inflation, while those that feature frames typically take only one to two hours to set up.None of an Intex pool's parts are concealed, so it is much easier to care for than an in-ground pool.Intex pools come in a variety of sizes - from models that can accommodate two people to those that hold eight or more - so even if your yard isn't large enough for an in-ground pool, there's likely an Intex model that will fit it perfectly.Even the largest Intex pools can be moved around your yard if necessary. Inflatable options are easy to deflate and transport, while those with frames can be disassembled and reassembled without much trouble.Types of Intex PoolsThe Intex pools made for kids are the smallest the company offers. They're designed to accommodate just a few children and an adult for supervision. They're similar to the larger inflatable vinyl models, but they usually feature bright colors and bold designs that appeal to youngsters. Some children's pools also provide fun features like a built-in slide or water sprayer.Intex inflatable vinyl pools offer the easiest setup of all their models, though these pools aren't the most durable. The pools are made entirely of vinyl, so you only have to inflate the top ring and add water. Intex inflatable vinyl pools come in a variety of sizes that can usually accommodate up to six people. Because they are less sturdy or durable than pools with frames, they're best used simply for cooling off and light play.Vinyl Intex pools with a metal frame are more durable than the inflatable vinyl models. The metal frame gives the pool added stability, so you can use it for more vigorous activities, such as exercise or water sports. Even the pools with frames can usually be set up in an hour or less. They're available in a variety of sizes that accommodate eight people or more.Vinyl with premium metal framelf you want the most durable Intex pool, a vinyl model with a premium metal frame is your best bet. It offers a strong steel frame that is treated to resist rust, as well as laminated triple-ply vinyl sidewalls. Like the other metal frame pools, it's easy to set up, so you can be adding water to the pool in about an hour.An Intex vinyl premium metal frame pool is larger than the other models and ideal for the most vigorous exercise and play. These models can easily fit eight or more people.Intex pool featuresSizeWhen you're trying to decide what size Intex pool to buy, consider both the size of your yard and the number of people who will use the pool at any one time. Here are some general guidelines.A pool that's 8 feet in diameter and 30 inches deep can fit two to four people.A pool that's 15 feet in diameter and 42 inches deep should comfortably fit four to seven people.A pool that's 18 feet in diameter and 48 inches deep can fit eight people or more.ShapeIntex pools are available in three shapes, rectangular, oval, and round, so you can choose the option based on personal preference and the space available in your yard.Ease of installationAll Intex pools are fairly easy to install, but you can set up some more quickly than others. The inflatable styles are the easiest to set up because you only have to inflate the top ring, which takes a matter of minutes. The pools with metal frames require you to snap the frame pieces together. These Intex pools can take one to two hours to set up.PumpAll Intex pools come with some type of pump to filter the water, so you can leave the water in your pool for more than just a day. Most models have either a sand filter or a cartridge filter pump.Sand filter pumpEasy operationReliable performanceRemoves small particlesRequires regular maintenance Cartridge filter pumpFilters larger volume of water than sand filterRemoves up to twice as much debris as sand filterFilters out much smaller particles than sand filterMust be cleaned regularlyRequires limited maintenanceUsually more expensiveAccessoriesSome Intex pools come with accessories to enhance your swimming experience.Cover: Many Intex pools come with a cover so you can keep leaves and other debris out of the pool between uses.Ladder: Deeper Intex pools come with a ladder to make getting in and out easier.Maintenance kit: Some Intex pools include a maintenance kit to make it easy to keep the pool in top condition.Games: Some of the children's pools and larger Intex pools come with pool toys or games like volleyball or ring toss.Intex pool pricesIntex pools vary in price based on the type and size, but in most cases you can expect to pay between \$10 and \$1,650.Intex kids' pools are the least expensive option, and these typically range from \$10 to \$35. Small Intex inflatable vinyl pools are also a good value, ranging from \$65 to \$300.Medium to large Intex inflatable vinyl pools typically cost between \$300 and \$600. Medium to large Intex vinyl pools with metal frames usually cost between \$500 and \$800.Medium Intex vinyl pools with premium metal frames typically cost between \$800 and \$1,200. Large vinyl pools with premium metal frames cost between \$1,200 and \$1,650.FAQQ. What sort of preparation do I have to do before setting up an Intex pool?A. It's important that you place an Intex pool on completely flat or level ground. If the area where you plan to set it up is uneven, you might need to level it out. Clear the area of any hard objects like rocks or branches, as well as particularly hardy grasses like St. Augustine or Bermuda that can actually grow through the vinyl liner. Many Intex models come with a ground cloth to lay down before you set up the pool, which helps protect the vinyl. If your pool doesn't come with a ground cloth, you can purchase one separately or use a heavy-duty tarp instead.Q. Do I have to put my Intex pool away for the winter?A. Some owners prefer emptying and disassembling their pool to store it away for the winter. However, if you live in an area where the temperature doesn't usually drop below 32°F in the winter, you can choose to leave it up if you follow some simple steps.Make sure the water is as clean as possible.Remove the ladder and any other accessories.Close off the drain plug and other fittings.Add winterizing chemicals to the water.Place an Intex cover over the pool. Q. Are Intex pools safe for dogs or other pets to use?A. While you might be tempted to let your favorite furry friend cool off in your Intex pool in the summer, it's not a good idea. Teeth and claws can easily tear the vinyl lining and cause leaks. Eddie has owned above-ground and inground pools for over 30 years.I'll show you how easy it is to change the sand in your pool filterPhoto by engin ak yurt on UnsplashHow to Change Pool Filter SandIf you were to hire a pool company to come in and change the sand in your pool filter, it would probably cost you over \$100 for labor, and then you would pay extra for the sand because they delivered it. I'll show you how to do it in about one hour. You won't be overcharged, and you'll know it's done right.The best time to change the sand in your pool filter is in the spring, when the water in the filter has been drained since last fall, the sand has had plenty of time to drain and dry out. Make sure the pool pump electricity is turned off, the valves going to the filter are all off, and like I said, the filter should be drained.If you need to drain the filter, unscrew the drain cap at the bottom of the sand filter, and drain the filter for at least 12 hours, otherwise the sand will be very wet and difficult to remove. Once the sand is well-drained, it's time to open the sand filter housing.Locate the bolts or strap in the middle of the sand filter housing, remove all the bolts or the strap completely, gently remove the upper half of the filter housing being careful not to damage any internal parts. The sand filter you see in the pictures is a bolt-on style with a rubber o-ring gasket.My big mess!Eddie CarraraTools You Will NeedSmall garden shovel Shop vacuum 5-gallon bucket New filter sand Silicone paste or non-petroleum jelly Wrench set and socket set Screwdriver Shop towel Time and patience Remove the old sand with a small garden shovel.Eddie CarraraBe careful not to damage the fingers with the shovel.Eddie CarraraStep 1: Remove the Sand From the HousingBecause all sand filters are different, caution needs to be taken when removing the sand from the housing. The filter has fingers that stick out from the center tube as you can see in the pictures, my Hayward sand filter has fingers at the bottom of the housing, some other filters may have them a little higher up inside the housing, so dig slowly and carefully.Using a small garden shovel, remove the sand into a bucket or wheelbarrow until you can't remove any more with the shovel. I used a shop vacuum to remove the remaining sand at the bottom of the filter housing, being very careful not to damage the filter fingers. You can rinse the inside of the housing with water but it's not necessary, then you just add the new sand gently, being careful not to damage the fingers.Love this stuff! I highly recommend it.Eddie CarraraStep 2: Choose Your Sand (You Have Options!)Pool technology has come a long way, and you have many options for pool filter sand. You can choose to buy just regular filter sand, or you can try an alternative like Zeo Sand. Zeo works more like Diatomaceous Earth filter media, which is designed to filter the smallest particles out of your water and is capable of filtering out particles as small as one micron.Zeo Sand has the same capabilities and DE and I found it to be 10 times better than regular filter sand. Zeo sand is a bit more expensive than filter sand but you only need half the weight. My Hayward filter takes 200lbs of regular filter sand, with Zeo sand, I only needed 100lbs, Zeo sand is just lighter sand, and works so much better.My pool water was always cloudy, not so cloudy you couldn't see the bottom, just a little white haze so the water was never crystal clear. I really notice a difference when the pool light was on at night, I used to be able to see all kinds of particles floating in the water causing that white haze, after changing to Zeo sand, it's completely clear. I was psyched, I couldn't believe the difference, I always thought the water was supposed to be a little cloudy—but now I know better!Check the gasket or o-ring for damage or cracks.Eddie CarraraRemove the remaining sand with a shop vacuum.Eddie CarraraStep 3: Reassemble the Sand Filter HousingOnce the sand is back in the housing, it's time to reinstall the housing top.Very important note: Remove the rubber gasket or o-ring, inspect it for damage, cracking or splitting, if there are any signs of damage, replace it! If it looks good and you're confident it won't leak, use a little silicone paste (not silicone sealer) and lube the rubber o-ring or gasket. This will help keep the seal pliable and will help keep it in place during the installation process.Clean the mating surfaces, be sure to remove all the sand from the areas where the gasket sits, if there is any sand under or on the gasket, you will have a leak, so make sure you remove every tiny spec of sand, you don't want to do this again, do you? Once you cleaned the mating surfaces and the gasket is back in place, and the top is on the housing, reinstall all the bolts, washers, and nuts, snug each one down but do not tighten them completely.Using two wrenches, tighten each nut a quarter turn, move on to the next one until you have tightened each one a quarter turn, now continue going around the perimeter of the housing to each bolt and making a quarter turn until they are tight, this will ensure that the gasket has even pressure and you won't squeeze or pinch the gasket causing a leak. You may have to tighten each bolt at least four times, but just keep tightening them till there snug, don't over-tighten them or you will cause a leak as well.Backwash first before circulating the water back into the pool.Eddie CarraraStep 4: Backwash the New Filter Sand You need to backwash the new sand before you circulate the water back into the pool, this will remove and debris and dust in the sand so it doesn't end up in your pool. You will probably have to prime the filter before you run the pump, just dump a couple of buckets of water into the basket housing on the at the filter or you can read my article on opening your swimming pool. Once you get the filter running, stand back, and watch the magic happen—especially if you used Zeo sand (see my comments above about this brand). Check the filter housing for leaks, if there are any leaks, snug the bolts in that area and see if you can stop the leak, if not, you will have to change the gasket or o-ringMore About Pool MaintenanceI Had the Worst Pool Algae This SpringThe pool algae this spring was the worst I had ever seen. I even used a winterizing kit, and it was still dark green, with black algae. The chemicals and pool filter were a losing battle, and the algae were winning.Closing an Inground Swimming Pool? How to Winterize ...After reading this article and viewing all the pictures, you will know more than your pool company does about closing your inground pool. I will walk you through the steps of closing an inground swimming pool, how to drain the filter, how to drain thThis article is accurate and true to the best of the author's knowledge. Content is for informational or entertainment purposes only and does not substitute for personal counsel or professional advice in business, financial, legal, or technical matters.Questions & AnswersQuestion: Am I being misled with advise that it is easier to remove sand from a pool filter by not draining the water?Answer: The only way I know how to remove sand is to drain the filter completely and scoop it out by hand using a small cup. CommentsEddie Carrara (author) from New Hampshire on July 13, 2020:Hi Chris,They may not sell that model anymore but I'm sure there are a lot of them out there still. The amount of sand wasn't 400lbs more like 150lbs. I agree the Zeo sand isn't any better than the regular sand. If I were to do it all again I think I would install a cartridge filter, my neighbor had one it was much more efficient. Although with the new technology you never know what's going to be the next best thing. Thanks for the feedback.Chris L on July 11, 2020:And one in ten sand filters has a top that comes off. The one in your article isn't even made anymore. Good luck reaching in through a 7" hole and scooping out 400lbs ofSand with a cup. And Zeo Sand is a gimmick. Use glass. It's ten times better than any sand.Pool guy tired of paying others on September 19, 2019:You really don't need to change the sand in a pool filter unless it has cemented itself or you are trying to go back to chlorine after using non-chlorine sanitizers. Sand on the beach is still there after thousands of years. You should suggest to people to do a deep clean yearly. PS, in 27 + years my pool filter sand has never been changed. To improve it's effectiveness I add a small amount of DE after each backwash.Eddie Carrara (author) from New Hampshire on August 02, 2012:Hi Scott,I had the same problem with my pool this spring, what you just stated is exactly what happened to me, but I had already changed to zeo sand. I dumped tons of chlorine , metal remover and even tried a neutralizer to start over again, nothing worked until I used Banish.I had to use a chemical called Banish to kill the algae, it has a chemical called copper sulfate in it that destroys algae, once I put the Banish in the pool and the green went away, my pool was crystal clear, like more clear then it's ever been since I owned the pool (13years). The pool water is so clear that when you turn the pool light on at night, , I don't have that haze in the water anymore.Scott, try banish or aluminium sulfate or copper sulfate to clear the green water. Let me know how you make out. Also read my other article called "I Had the Worst Pool Algae This Spring" the link is right above the comment box. Read Tony's comment, he uses copper sulfate too, and he seems to be the laziest pool owner I know.Scott on August 02, 2012:Do NOT change to ZEOSand. I've had a pool for 7 years. No problems. Changed to ZEOSand and been green ever sense. All levels read great. Pool is a green as can be. Shocked like crazy. Chlorine level off the charts. Still green. This crap does not filter. Stay with regular sand. Just add a little DE if you need better filtering. DO NOT FALL FOR THIS WITCH DOCTOR CRAP. And yes..I backed washed 6 times before filtering letting it settle for an hour between backwashes and rinsed 3 times. PURE JUNK.Eddie Carrara (author) from New Hampshire on May 15, 2012:Hello Prakash,I have 20 years experience with pools, and I lean something new each year, lol. Thank you for the comment :)Prakash Dighe from Dallas, Texas, USA on May 15, 2012:Eddie, as always, very well researched and presented! how to install intex easy set pool filter. how to set up intex easy set pool. how to put up intex easy set pool. how to set up intex easy set pool pump
