ATEROSKLEROSIS

DEFINISI

Aterosklerosis adalah penyakit akibat proses pendudukan pada pembuluh darah arteri besar dan sedang, bersifat progresif, yang ditandai dengan deposit lemak kuning, merah, kemerahan, putih, bening dan kelabu di bagian-bagian pembuluh darah yang menimbulkan perubahan dan penyempitan dinding arteri, sehingga mengakibatkan kebocoran dan ketipisan arteri.

Aterosklerosis sangat dipengaruhi kadar kolesterol tinggi (khususnya LDL, lemak).

If this continues, it can cause various other diseases to enter your body and your health can be greatly impaired, especially in old age. Want to consult more with a doctor about health? There are several factors that can cause this blockage of the arteries in you. You must buy this medicine with a prescription. If these arteries are not taken care of, this can lead to atherosclerosis, which is a condition in which hardening of the arteries is caused by the accumulation of cholesterol plaques. Changing your daily lifestyle to be healthier is the main thing that needs to be done. The reason is that there are many risk factors that can threaten your health condition and even your safety. Prevention You need to know, because prevention of atherosclerosis itself can be done by changing your lifestyle to be healthier if still light. Information Atherosclerosis is a narrowing that occurs in the arteries as a result of the accumulation of bad fatty plaques on the artery walls. With this series of tests, the results are also guaranteed to be more accurate. In fact, you should also be diligent in going to the doctor for health checks to continue monitoring your health condition so that a more serious blockage does not occur. Some of these risk factors include: heart attack, coronary heart disease, stroke, cholesterol, hypertension, diagnosis, because the diagnosis of atherosclerosis itself can be made by performing several types of tests at the doctor's's.
