Different Screen Sizes

ANDROID

Google launched an overhauled, polished Market place few days back. Major improvements had been with the UI. A big step from a boring interface to the one like App Store. Now, Google has made the latest Android SDK available, introducing a complete view of all the new features that "Donut" (Android 1.6) will provide. Google had been revealing future plans as they proceeded, this is the first time they have been presented to the public package. What's New - Feature Breakdown Android donut search home screen New Android Market- This update, as mentioned earlier, completely redesigns the Android Market. It features new Top Apps pages, adds screen-shots to app descriptions, adds more intelligence to searches, thereby improving the overall shopping experience. Custom Gesture Support - A new tool in the SDK called GestureBuilder gives the developer the power to create entire libraries of new app-specific gestures. This will encourage developers to leverage Full MultiTouch in he new applications. Better Camera App- The native camera app has been overhauled in design and get's new features. User can now switch between still and video camera modes easily, and look through the gallery. Additionally, it's faster, camera launches 39% faster, and there is 28% less time lag between consecutive shots. Text-to-speech API- A multi-lingual speech engine called Pico made by SVOX is included in Donut. This was one of the earliest features shown off for Donut at Google I/O this year. Previously, Google had removed the support of gesture control on Apple's request. But now as they became official Rivals, it's here to compete. CDMA networks- The CDMA mobile stack is now supported, in addition to the previous support for GSM. iPhone seriously lacks on this. Universal Quick Search Box- Quick Search is like the iPhone's "Spotlight" OS 3.x search. Quick Search Box framework lets users search through the phone as well as the Web, pulling up browser history, bookmarks, music, contacts and other data along with results drawn from the Internet. Battery "fuel gauge"- This new feature lists the battery consumption of each running application and service, letting the user fully streamline his battery consumption. VPN support- Google finally thought about Enterprise. Users can configure and connect to L2TP/IPSEC pre-shared key-based or certificate-based VPNs, L2TP only VPN, or PPTP only VPN. This is agreed move for Enterprise corporate customers. Minor Kernel Upgrade: The Linux Kernel has been updated from 2.6.27 to 2.6.29, the OpenCore 2 media engine is now supported, as are a greater number of screen resolutions such as QVGA and WVGA, and new accessibility plugins such as tactile or aural feedback. Google's Xavier Duchroet today said, "You can expect to see devices running Android 1.6 as early as October. As with previous platform updates, applications written for older versions of Android will continue to run on devices with Android 1.6. Please test your existing apps on the Android 1.6 SDK to make sure they run as expected." Rating: 0.0/10 (0 votes cast)

Android 1.6 Donut (API 4) Release date : September 15, 2009 Version : v1.6 On September 15, 2009, Android 1.6 - dubbed Donut - was released, based on Linux kernel 2.6.29. Included in the update were numerous new features. Features Voice and text entry search enhanced to include bookmark history, contacts, and the web Ability for developers to include their content in search results Multi-lingual speech synthesis engine to allow any Android application to "speak" a string of text Easier searching and ability to view app screenshots in Android Market Gallery, camera and camcorder more fully integrated, with faster camera access Ability for users to select multiple photos for deletion Updated technology support for CDMA/EVDO, 802.1x, VPNs, and a text-to-speech engine Support for WVGA screen resolutions Speed improvements in searching and camera applications Expanded Gesture framework and new GestureBuilder development tool Written by Ranjan - 1438 Views Android 1.6 (Donut) vs Android 2.1 (Eclair) Android 1.6 (Donut) and Android 2.1 (Eclair) are two versions of the Android mobile platform. Android mobile platform was initially created by Android Inc. based on a modified version of the Linux kernel. It is an open source software stack developed for mobile phones and other mobile devices. Google bought Android in 2005 and formed the Android Open Source Project (AOSP) in collaboration with Open Handset Alliance to maintain the Android system and to develop it further. Since then there had been a number of version releases to Android platform. Android 1.6 (Donut) and Android 2.1 (Eclair) were released during late 2009 to early 2010 period and they are the early Android platforms that supported multi-touch feature in Android based mobile devices. However, the virtual keyboard was introduced with Android 1.5 (Cupcake). Android 2.1 (Eclair) Android 2.1 is a minor update to Android 2.0, however the Android 2.1 is the officially released version. Android 2.0 was made obsolete with the release of Android 2.1. Android 2.1 gave totally a new experience to users when compared to Android 1.6. The major change from Android 1.6 is the improvement to virtual keyboard with multi-touch support. Android 1.6 (Donut) Android 1.6 a minor platform release introduced in October 2009. It incorporated the features in Android 1.5 (Cupcake) with few additional features. Android 1.5 is a major release in May 2009. The Linux kernel version for Android 1.5 is 2.6.27. And it was upgraded to 2.6.29 in Android 1.6. The on-screen soft keyboard was introduced with Android 1.5. Android 2.1 (Eclair) API Level 7 . New Features 1. Screen support for low density small screens QVGA (240x320) to high density, normal screens WVGA800 (480x800) and WVGA854 (480x854). 2. Instant access to a contact's information and communication modes. You can tap a contact photo and select to call, SMS, or email the person. 3. Universal Account - Combined inbox to browse email from multiple accounts in one page and all contact can be synchronized, including Exchange accounts. 4. Search feature for all saved SMS and MMS messages. Auto delete the oldest messages in a conversation when a defined limit is reached. 5. Improvement on camera - Built-in flash support, digital zoom, scene mode, white balance, color effect, macro focus. 6. Improved virtual keyboard layout for accurate character hits and improve typing speed. Virtual keys for HOME, MENU, BACK, and SEARCH, rather than physical keys. 7. Dynamic dictionary that learns from word usage and automatically includes contact names as suggestions. 8. Enhanced browser - the new UI with actionable browser URL bar enables users to directly tap the address bar for instant searches and navigation, bookmarks with web page thumbnails, support for double-tap zoom and support for HTML5: 9. Improved calendar - agenda view provides infinite scrolling, from the contact look up list you can invite for event and view attending status. 10. Revamped graphics architecture for improved performance that enables better hardware acceleration. 11. Support Bluetooth 2.1 and included two new profiles Object Push Profile (OPP) and Phone Book Access Profile (PBAP) . Android 1.6 (Donut) API Level - 5, Linux Kernel 2.6.29 . New Features 1. Quick search box - search across multiple sources direct from homescreen - system list results based on previous clicks 2. Improvement to camera feature - Integration of camera, camcorder and gallery - quicker toggle between still and video mode - select multiple records for deletion - launching and processing faster than earlier 3. VPN settings - new control panel in settings to configure and connect to VPN - Support for L2TP/IPSEC pre-shared key based VPN, L2TP/IPsec certificate based VPN, L2TP only VPN, PPTP only VPN 4. Battery usage indicator - guide users to save battery power by showing power consumption for each applications and services 5. New accessibility service available for download . Features incorporated from Android 1.5 (Cupcake) 1. On-screen soft keyboard that works in both portrait and landscape orientation - Support for user installation of 3rd party keyboards - User dictionary for custom words 2. Home screen - Widgets - Live folders 3. Camera - Video recording - Video playback (MPEG-4 & 3GP formats) 4. Bluetooth - Stereo Bluetooth support (A2DP and AVCRP profiles) - Auto-pairing 5. Browser - Webkit browser introduced - Squirrelfish Javascript engines added - Copy 'n paste - Search within a page - User-selectable text-encoding - Unified Go and Search box (UI change) 6. Contacts - Shows user picture for Favorites - Specific date/time stamp for events in call log - One-touch access to a contact card from call log event 7. Google applications - View Google Talk friends' status in Contacts, SMS, MMS, Gmail, and Email applications - Batch actions such as archive, delete, and label on Gmail messages - Upload videos to Youtube - Upload photos on Picasa . Android 1.6 Donut was the fourth version of Android update released on September 15th 2009. It is based on Linux kernel 2.6.29 and includes numerous new features and updates. Android 1.6 is an awesome case of a update that, today, would have little motivation to exist as a different point update . The real changes essentially came down to new forms of the Android Market, camera, and YouTube. In the years since, applications like this have been broken out of the OS and can be updated by Google whenever. Prior to this modularization work, however, even apparently minor application updates like this required a full OS update . The other enormous change—CDMA support—exhibited that, in spite of the rendition number, Google was as yet caught up with getting essential usefulness into Android. The Android Market was dedicated as adaptation "1.6" and got an entire upgrade. The first all-dark plan was tossed for a white application with green features—the Android designers were plainly utilizing the Android mascot for motivation. The new market was certainly another style of application design for Google. The best fifth of the screen was committed to a banner logo declaring that this application is to be sure the "Android Market." The banner buttons were used for Apps, Games, and Downloads, and a hunt button was put to one side of the banner. Beneath the route was a thumbnail show of included applications, which could be swiped through. Underneath that were much more included applications in a vertically looking over list. The greatest expansion to the market was the consideration of application screen captures. Android users could at long last observe what an application looked like before introducing it—already they only had a user reviews and brief description to go on. Your own star review and remark was given best charging, trailed by the depiction, and afterward at last the screen captures. Android 1.6 was the principal Android form to monitor battery use. Covered in the "About phone" menu was a choice called "Battery utilize," which would show battery utilization by application and equipment work as a rate. Tapping on a thing would raise a different page with applicable details. Equipment things had buttons to bounce directly to their settings, so for example, if you feel battery is used high for display, then you can low the display timeout. The camera application was transformed from a full-screen, minimal design to a boxed viewfinder with controls as an afterthought. With the new camera application, Google attempted its hand at skeuomorphism, wrapping the entire application in a calfskin surface generally imitating the outside of an exemplary camera. Exchanging between the camera and camcorder was finished with an exacting switch, and underneath that was the on-screen shade button. Tapping on the previous picture thumbnail never again propelled the display, yet a custom image viewer that was worked in to the camera application. When seeing a photo the leather control area changed the camera controls to picture controls, where you could erase, share a photo, or set the photo as a backdrop or contact picture. There was still no swiping between pictures—that was as yet finished with bolts on either side of the picture. Donut was additionally the main rendition to help text-to-speech (TTS), which means the OS and applications would have the capacity to sass you in a robot voice. The "Discourse synthesizer controls" would enable you to set the dialect, pick the discourse rate, and (fundamentally) introduce the voice information from the Android advertise. Today, Google has its own TTS that boats with Android, yet it appears Donut was hard coded to acknowledge one particular text-to-speech engine made by SVOX. Yet, SVOX's engine didn't transport with Donut, so tapping on "introduce voice information" connected to an application in the Android Market. (In the years since Donut's prime, the application has been brought down. It appears Android 1.6 will never talk again.) This version brought a totally new gadget called "Power control." This involved on/off switches for regular eager for power highlights: Wi-Fi, Bluetooth, GPS, Sync (to Google's servers), and brightness. The search gadget was updated to be considerably slimmer looking, and it had an implanted receiver button for voice seek. It currently had some real UI to it and found as-you-type live looking, which sought the Internet, as well as your applications and history as well. The "clear notification" button has contracted down significantly and lost the "notices" content. In later Android variants it is decreased to only a square button. The Gallery proceeds with the pattern of removing usefulness from the menu and placing it before the client—the individual picture see picked up button for "Share," "Delete," and "Set as." Android 1.6 Donut includes the following features: Voice and text section look upgraded to incorporate bookmark history, contacts, and the web Capacity for developers to incorporate their text in search results Multi-lingual discourse blend engine to enable any Android application to "talk" a string of text capacity to see application screen captures in Android Market and this version makes searching easier. Display, camera and camcorder all the more completely coordinated, with quicker camera get to Capacity for user to choose numerous photographs for delete Updated innovation bolster for CDMA/EVDO, a text-to-speech engine, 802.1x and VPNs Support for WVGA screen resolutions Speed changes in seeking and camera applications Extended Gesture system and new GestureBuilder advancement tool
